## FIPRONEX®

---

Topical Solution  
Long-acting ectoparasiticide

## Formulation

---

Fipronil 2.5 mg, excipients q.s.ad. 1 mL

## Indications

---

Offers an effective control of fleas and ticks in adult dogs and cats, and in puppies and kittens since the first week of age. It has additional effect against lice and sarcoptic mange (var. canis). It controls the infestation very rapidly, killing adult fleas before they lay their eggs. The residual effect of Fipronex® prevents reinfestations, killing fleas and ticks for a minimum period of 60 days.

## Dosage and Administration

---

3 to 6 mL/kg of b.w. depending on the fur of the animal. Topic application.

## Commercial Presentation

---

Spray x 55 mL, Spray x 110 mL, Spray x 275 mL,

## SENASA Registry

---

SENASA Perú: F.07.08.N.0209
